

Bitcheck . One-Pager Summary

Squad Hackathon 3.0 · Smart Systems: The Intelligent Economy

The problem

Deepfakes, AI-generated invoices, and tampered documents are flooding digital channels. People and businesses approve payments and publish content based on media they cannot trust, with no fast, explainable way to check authenticity before **money or reputation** is lost.

Our solution

Bitcheck is an AI media-authenticity platform that has 2 offerings:

- **Business-to-Consumer (B2C) App:** A direct application for the general public to upload media (image, text, audio, or video) and receive an instant trust score, verdict, and explainable signals (AI patterns, metadata issues). Pricing: Free tier; Pro for high-volume users.
- **Business-to-Business (B2B) API/Platform Integration:** Allows businesses to integrate our content authentication engine into their existing workflow (e.g., insurance companies verifying submitted claims documents). This uses a **Pay-as-you-go (PAYG)** flexible consumption-based payment model.

Stack

- Frontend: Next.js
- Backend: Django (Authentication, billing, and job processing)
- Intelligence: AI/ML Models

Squad APIs used

1. **Initiate Payment:** This serves as the foundation for seamless monthly subscription billing via *POST /transaction/initiate*.
2. **Charge Card:** We use this to automate recurring Pro subscription billing cycles via *POST /transaction/charge_card*.
3. **Cancel Authorization:** Revokes card tokens upon subscription cancellation via *PATCH /transaction/cancel/recurring*.
4. **Virtual Account:** Enables B2B wallet top-ups via bank transfer/webhooks via *POST /virtual-account/business*.

Pillars addressed

- **AI Automation:** Features an automated ingest, ML analysis, scored verdict and explainability.
- **Trust & Confidence:** Real-time synthetic media detection.
- **Squad APIs:** Our revenue stack is built on Squad end to end. Virtual Accounts let B2B customers top up by bank transfer and receive metered API tokens instantly. Payment Gateway checkout with card tokenization powers recurring monthly debits for B2C Pro.
- **Financial Innovation:** Dual model for Nigeria: consumer subscriptions and B2B bank-transfer metered API
